Touch automatic rotation screen. {{{{pagAnslation,yes PageTranslation.ContentProblem}}}} {{{{pagAnslation,tanksfeedback pagAnslation.no}}}} {{{{pagAnslation,yes pagAnslation.contentproblem}}}} {{{{pagAnslation.No PageTranslation.tanksfeedback {}}}} While most of the time, it makes sense to keep your iPhone screen formatted vertically, there are occasions when it is necessary occasions when you need to turn the landscape format. Whether you're coming to Netflix, showing hi-res images or playing a game, it's not always ideal to use screen formatting for standard iPhone. Fortunately, turning your screen is a quick and simple process that should take a few seconds. Not only that, but you can block the screen of your iPhone in a particular rotation to make sure you don't change even if you happen to physically move the phone into your hand. Here is everything you need to know. How to rotate the iPhone1 screen. First of all, make sure that the iOS screen rotation lock is not active on your iPhone. To do what, look in the upper right corner of your home or lock screen, next to the battery indicator, for a small icon that looks like a lock with an arrow curving around it. If you don't see it, this means that the screen rotation block is not active. If the icon is there, you will need to disable it. 2. To disable the screen rotation block, unlock your iPhone so that you are on the main screen and scroll from below to reveal the control center. The portrait guidance lock button is positioned by default in the control center. Jennifer Ancora / Business Insider 3. Locate the above icon mentioned with a small lock with a curved line at a circumstance. If the screen rotation block is active, this will be highlighted. Touch it to Unhighlight It, which will disable the blocking of the rotation of the screen and allows a screen to rotate freely. 4. Al Press the Home button on your iPhone to return to the home screen. Now when turning the phone physically in horizontal mode, the screen should follow the example. When the orientation lock button is dark, it is not activated, which means that the screen can rotate. Jennifer Still / Business Insider What you should do if the iPhone screen will not be noticed, you need to note that while iOS and certain apps such as rotating the Netflix and YouTube support screen, not all applications will do it. If you have assured that the screen rotation lock is disabled on the phone, it is likely that the app in question may not allow the screen reorientation. If you are six What an app supports the screen rotation, but it doesn't work on your iPhone, you have a couple of options to try to solve the problem. 1. Restart your device. Sometimes the technology can be fake and a simple reboot gives your phone the possibility of getting the right things. There is no rhyme or right for which it works, but often does it. 2. If you have restarted the device and disabled the screen rotation lock, but the screen does not rotate yet, it may be time to contact Apple support to solve the problem. Your phone may have a broken accelerometer or another problem you need a professional to be solved. Bring your phone to your local Apple store or authorized Apple repair shop is the first step to get the fixed problem. fixed.
