How to take a screenshot on moto g6

How to do screenshot on moto g6. How do you take a screenshot on moto g6. How to take a screenshot on moto g6 play.

You may not know whatever you have seen on your phone, Moto G screen, you can share them with your friends or family. This includes web pages, home screen, app screen, playlist, game results of course, just the screenshot, not the video file or the app itself. Taking a screenshot on motorcycle g is actually very easy. You don't need app. In reality, most screen capture apps require a rooted phone. So don't consider any apps to make screenshots on motorcycle G. It is not necessary ADB, which requires a USB connection to a PC for your Moto G. Many developers and Android Geeks like to use this heavy tool. To take the screenshot on Moto G, you can simply press and hold both the power key and volume down for about three seconds. You will feel the camera's shutter click. Then, the screenshot is saved in your gallery. The trick is press and hold the two buttons (see Moto G Layout here) simultaneously. If you press the power button too soon, you will get the power options. If you press the power button too late, you will receive the volume options. You can check the screenshot taken in Apps - Gallery - Screenshots. If you want, you can change the screenshot file in moto G. The screenshot is just a normal image file. You can also use any file explorer (eg, ES File Explorer) To directly access the individual screenshot files. All Moto files G screenshots are saved in the /SDCARD / Pictures / Screenshots folder. It is very simple? This screenshot taking method is originally from all Android phones. So if you have other Android phones, you can try this method to take screenshots next time. It should work. If you have questions on the screen capture for Moto g, let us know in the comments box below. Other guides, suggestions and graduated tricks for Your Moto G phone is available at our most popular Moto G HOW-TO guide page. 2 post 08-06-2018 United States of America 1 Signins 13 Page Views: 2 Registered: 08-06-2018 Location: United States of America Visits: 13 Message 1 of 4 of 4 * 2018-08-06, 16: 58:00 At any time to take a screen I received this message even if I'm Using only 20.31 GB of the 32GB available for internal storage, and I am using only 7.4 GB of 128 GB SD which is formed as an internal, even do not allow me to download video, music or podcast. It is also slow on phone updates, I tried to restart the phone and simply turning it off for a while. The next thing I'm going to try is a factory reset just wanted to know if there is something else I should try before. Also, if your device stops, continues to storage inexplicably or otherwise it does not work as expected and considering that the factory has been restored, you can try to fix these problems by erasing the partition of the phone cache. Cancel cache partition can have results similar to a factory restore without losing personal data on the phone. Turn the Phone Offess and hold "Volume Up" and "Power" at the same time as the theater "Model mode selection" Screen Release the Tastress "Volume Down" to navigate in the menu and highlight "Recovery" Press "Volume up" to select The option highlighted "No command" screen, and release "Power" and "Volume Up" volume up "simultaneously until you access recovery recovery in recovery, press "Volume down" to browse e highlight "wipe cache partition", press "Power" power to confirm cache is canceled, highlight "reboot system now", and press "Power" if the cancellation of the cache partition has not helped, the next step would be restoring the data of the preform manufacturing restore of all the apps. Hope this helps you! Greetings, Swarajmoto Support if you need a reference to update your profile, profile, Click this link. 2 messages 2020/03/15 United States of America 1 Signins 5 pages Viewed Messages: 2 Registered : 2020/03/15 Location: United States of America Views: 5 Message 3 of 4 2020/3/15, 16:57 pm I have the same problem - and some applications don't work. I swept the cache away but don't solve the problem. Is there any other options in addition to factory reset?
