Impoved Metadata Scanning.fixed files sorting.improved search for local files.Fixed MyCloudHome Connection.Fixed OneDrive 2FA Connection.improved user interface for iPad.Fixed user interface. Toolbar actionsFixed. Simplified context menu. The app has worked beautifully for a type of taste of MP3 software taste or anything else, but there is something in the last update that pauses music by way when I open the photo app in the default mode and Mixed. I tried to work with it at the beginning, but it has become truly annoying over time, young lady and simply trying to get shots of something in every other moment, even if it continues to play if I'm using my vocal app at the same time Memo quite curiously.This and the size of the files stop presenting yourself in the section. I'm not sure why he went to the latest update, I would like to know how much of the 200 megabytes or so my podcasts are taking, haha.oh! And music speeds are a species of funky. Usually no matter the sparkling nature of them, but as I took back listening to crystal castles, not being able to hear the changes in tone from .95 and 1.05 speeds up the type of sewing. Again, no dealbreaker, but things keep me absolutely consider this app app Would I buy over again if I could. The app has been fantastic when I get it, it would have been five stars, but lost a star after an upgrade © because the album covers the thing has been screwed. Would choose to be alone or he would not have one. Apart from that it still worked well. After this latest update, I am very disappointed. He said that the album covers what would have been resolved, I go in the app and all but some of the album covers are not there. Just empty. Those who are not covered with the original cover that I chose for the album. Only the very image of my google drive. When I chose the image of change, it has only solved for the album image, not images in the album alongside songs. And it's all, I can not even load songs from the garage band for the app anymore. Using the band of the garage to make songs and copolymer of them Evermusic. Now, does not give this option. He just says "QUALCUNOMUSIC" It loads the song and then nothing happens. It's there inside. At first I thought it was a problem with the app garage band, but when I went in I found Evermusic who is now an option to upload your songs from the app by simply selecting a file. I did, and loaded and loaded and I have not done anything. If you solve this stuff, cambierA' my rating of 5 stars. Thanks in advance. While I love all the features that this app, there are a couple of bugs I noticed that could be solved. First of all, if I pause my music and then go to BEXT song, the next song will play, and the Pause / Play button does not work. This means that I have to press the Pause / Play button twice to pause the next song rather than once. If I'm playing my music in the background, the time remaining indicator is not always accurate. When not accurately show how much time is left before the current song ends, it will show here a minute remaining from the control center or from the lock screen, but when I open the app, seconds remaining. © It is not because I have a background update disabled in my settings, I've turned on for the app. Finally, inside the app if you have activated the button on the upper right to view my playlist while playing a song, all the songs in the playlist are in random order. Show them only in random order, if activated the button, but if you scroll to see my playlist, everything is in order. Hopefully a future update will solve these problems, but overall I really like what the app has to offer. The developer, Artem Meleshko, indicated that the practices on app privacy may include data management as described below. For more information, see the developer's privacy policy. The following data can be used to track up the Apps and the owner websites of other companies: the following data can be collected and connected to your identity: the following data can be collected but is not connected to your identity: Privacy Practices They may vary, for example, based on the functionality you use or your age. Learn ... Major APP Developer Support Privacy Policy Ios has always been one step closer to Android in the user interface and user experience. But things are turning in favor of Android. By opening and the ability to do more with customization it helped developers create apps that can attract users from other smartphone ecosystems. There are tons of music players for Android with tons of features, but a feature that is rare in the Android music player is Coverflow. This feature has been inherent in the iPhone since its launch. For me Coverflow is quite seductive and easy to scroll with the album and this is the feature that I loved the most about IOS. The Google Play music app interrupted this feature in their new update. I don't know know why and I really miss that feature on Android. But Google Play has a handful of apps that supports 3D graphical user interface for scroll albums for arts. Here are 5 best apps for all music lovers looking for coverage Music player in Google Play. 1. Hi Music A iPhone 5 Style Hi Music is by far the best iPhone-style music player on the Google Play Store. The user interface seems almost identical to the iOS 6 Music, and comes with the possibility of playing music from the block screen that is identical to the iPhone 5 lock screen. App supports All features that are on iPhone Music App, reproduction of Hi seamless music media, browsing by the group, reproduction queue management, repetition and random with volume control and music playback. Playback of the widget, playback of the lock screen, equalizer, sharing via e-mail and Bluetooth, modify MP3 tag, crawling to switch to the next song and coverflow, which is fluid and identical to iTunes and iPhone App Coverflow. Developer: Hi Dev Studio Availability: Free on Google Play, paid version available. 2. ISENSE Music A 3D Music Player Isenseã music player, 3D is Android music player inspired by the previous generation, HTCã, meaning music. The app supports rich in features with themes, fast scroll function, attractive ui with options for reverse controls, a screen block, game and widget, browse bya group, equalizer, generation art casual album with mp3 tag modifying and fading Crossed. App supports the shot function to the song change together with utility album covers, add-on, capacity to exclude music folders and music search with 3D Coverflow. Developer: SmoothApps Availability: Payment on Google Play 3. Music Player Lux3D Music Player Lux3Dã, it's simple MP3 music player Yeta Eye-Catching, on Google Play. The music player is equipped with a smooth smooth 3D transitions ã, and easy to use controls. The application designed, from some of Japan's best application developers uses matrix engine concept to fully use the potential OFA OpenGLã, in musical readers. The application has a 3D user interface. Beautiful operating capacity withã single handedã, users can pass controls based on their use, random playback option and send now playing music directly toa facebook, or twitter with single touch. Developer: Neos Availability: Free on Google Play, paid version through one in I am buying. 4. Best music better the music is a loaded characteristic but light Android music player with ID3ã udit tag capacity , Search for repetition or random tracks, with color theme of the player, the ability to create and edit playlists, scrolling Last.fm , scroll gestures, download album covers, different widgets, locking screen controls and coverflowã, play albums Developer: Odesanmi Availability: Payment on Google Play Music Player 5.
