URL of this page: from the home reference of genetics. More information Systemic Scleroderma is an autoimmune disorder that affects the skin and internal organs. Autoimmune disorders occur when the immune system malfunctions and attacks the tissues and body organs. The word "scleroderma" means hard skin in Greek, and the condition is characterized by the accumulation of scar tissue (fibrosis) in the skin and in other organs. The condition is also called systemic sclerosis because fibrosis can affect organs different from the skin. Fibrosis is due to the excess production of an excess protein called collagen, which normally strengthens and supports connective tissues in a
