The student understood how to use the protractor and lined up the angle correctly but confused the inner and outer scales on the protractor. On angles C and D, the student answers with the measure of the supplemental angles.

Function	Equation	Y-intercept	X-intercepts	Vertex	Domain	Range
Linear	$y = 2x + 3$	(0, 3)	$x = -1.5$	(-0.75, 1.5)	All real numbers	All real numbers
Quadratic	$y = x^2 - 4x + 4$	(0, 4)	$x = 2$	(2, 0)	All real numbers	$y \geq 0$
Exponential	$y = 2^x$	(0, 1)	None	None	All real numbers	$y > 0$
Logarithmic	$y = \ln(x)$	None	$x = 1$	None	$x > 0$	All real numbers

Next, I write equations for the 4 examples iPage 2 This is a corresponding activity with different types of functions: absolute value, cube root, exponential decay, exponential growth, linear, square root. Students will need to cut and indicate the charts and tables on a pre-made sheet and WritPage 3in This matching activity, easily used as cutting and pasting, students will match a square chart to its equation, intercept Y, # solutions and value of solutions. Each must have a chart, equation, verbal description, domain and range and table. I go around and highlight a blank on the different sheets of the students so that they put their response on the board. A PDF version and a editable Word version are both included. In this activity, Word solutions are exchanged with words, X intercepts and zeros to strengthen that all mean the same thing! Included are an answer key, a registration sheet and overhanged items to cut. This is a beautiful review or culminating activity after learning all these different types of models/functions. There are 12 total functions. Feel free to use and edit as you see fit! Page 425 Google Form Assessment (Auto-classification) 5 Factoring Multiple choice questions including transformations, summits, domains, ranges, ii, iood and estremA7 Resolution square equations from charts and equations by means of formulation and formulation on Google Form can be automatically printed student responses are automatically inserted into Google Shee I Using Li. Notes to introduce the graphs of square functions. It is a great way to introduce key attributes of square charts, including summit, symmetry axis, domain, minimum and maximum values. After filling out the box for parent function as class, I willthem 5 minutes alone to complete the other examples. examples.
