Using a Multimeter

MUST KNOWS

- 0 MEASURE VOLTAGE IN PARALLEL WITH LOAD
 - 0 MEASURE CURRENT IN SERIES WITH LOAD
 - 0 MEASURE RESISTANCE IN A DEAD CIRCUIT
- SET DIAL TO HIGH RANGE AND COME DOWN

Control Layout

- Be careful not to apply voltage to the Test Leads when they are connected to the COM (Bottom) and VΩmA (Center) Jacks and the Multimeter is in an Ohms testing setting. Damage can occur to the multimeter or the fuse may blow.
- Do not switch between testing modes with the multimeter connected to a circuit.

AC Voltage Measurements

Measure AC conductors carrying up to 750 VAC, 45-450 Hz.

- Turn the Range Selector Switch to 750 ACV setting. **Always start with the highest range if the voltage is unknown.**
- Plug the red lead into the VΩmA (Center) Jack. Plug the black lead into the COM (Bottom) Jack. Switch the Multimeter ON.
- Carefully touch the exposed conductors with the tips of the probes to measure the voltage (not amperes).
- Read measurement. If the voltage is less than 200 volts, set the Range Selector Switch to the lower range.
- When testing is complete, remove Test Leads and store with multimeter.

DC Voltage Measurements

Measure DC conductors carrying up to 1000 VDC.

- Turn the Range Selector Switch to 1000 DCV setting.
- Follow the directions above under "AC Voltage Measurements", only use the DC settings instead.
